

THE VERIFIED WEBSITE REVIEW LOOP

# SiteCheck

*Find it. Fix it. Prove it.*

A focused review tool for independent developers and designers who need evidence before handoff.

03

STATIC CHECKS

71

PYTHON TESTS

00

PAID APIS

## 01 / THE PROBLEM

# A report is a start. A recheck is the proof.

A client handoff should answer three simple questions: what is wrong, where can I see it, and did the change resolve it?

---

### CONTEXT

Keep the source, evidence and suggested next step together.

---

### PRIORITY

Choose one correction instead of hiding the remaining work.

---

### VERIFICATION

Rerun the same rules and keep new findings visible.

## 02 / THE WORKFLOW

# A small loop. Built to be repeated.

### 01

#### INSPECT

Paste HTML, load a project folder, or run the local Python CLI.

### 02

#### DECIDE + FIX

Review a concrete finding. Edit the source and keep the decision human.

### 03

#### RECHECK

See which occurrences remain, disappear, or appear after the change.

OUTPUT: JSON + HTML REPORTS / BROWSER: EXPORTABLE JSON

### 03 / REPRODUCIBLE RESULT

# Three issues. One deliberate correction.

3

BEFORE

2

AFTER

1

FIXED

0

NEW REGRESSIONS

The form label is corrected. The image-alt and missing-link findings remain open.  
Run `python3 tools/reproduce_demo.py` to regenerate and assert this result.

## 04 / TEST THE EDGE CASES

# The same rule can fail more than once.

71

**Two unlabeled images. Correct only one.**

The other stays open, with its own evidence. Repeated findings are no longer collapsed into one rule ID.

### PYTHON TESTS PASS

Original 42 tests plus  
29 regression cases.

Also checked: wrapping labels, ARIA references, encoded filenames, query strings, line shifts and mixed legacy reports.

17 BROWSER SCENARIOS / SIX LANGUAGES / MOBILE + DESKTOP

## 05 / IBM BOB + HUMAN REVIEW

# A visible development trail.

## 01 / PLAN

## 02 / BUILD

## 03 / RECHECK

IBM Bob supported three documented sessions: planning, Python implementation and the recheck workflow. Athos directed scope, priorities, review and art direction.

September 26: an independent Codex-assisted corrective review added the regression coverage. This later work is documented separately from the original Bob sessions.

06 / USEFUL, WITH A CLEAR SCOPE

# Local by design. Focused by choice.

## For a designer or freelancer

Review a small HTML project before handoff, send a readable evidence report, and verify the chosen correction.

## Three static rule families

Missing image alt, form names and missing relative file targets. No account, runtime AI service, paid API or file upload.

---

No external-link crawling or HTTP checks. Server routes and base URLs are outside this check. It is not a complete accessibility audit. No unmeasured time-saving claim.

---

07 / TRY IT YOURSELF

# Less guesswork. More evidence.
